Dear Justin,

Summer is right around the corner and with sustainability becoming more and more popular, gardening can take on a whole new meaning. We know your readers are interested in gardening and would be interested in the benefits of gardening and some eco-friendly how-to's.

Our landscaping staff has all kinds of tips on gardening. They know the best plants for your yard and the most environmentally friendly way to take care of the plants. From the planning process to upkeep, Terrain has everything gardeners need to create a healthy and beautiful yard.

It can be overwhelming to walk into a garden center and see hundreds of plants. Sure, you can tell which ones are the prettiest, but most people don't know which ones are the best for their environment. And they may have a more difficult time trying to figure out how to best care for their plants. You can always find chemicals for garden upkeep, but do you know the best ways to naturally maintain your garden? The experts at Terrain have the answer to these questions, and many more.

Our expert landscapers at Terrain will be available to you to answer questions and provide more information about landscaping and gardening to increase sustainability.

We are coming to you alone with this story because we know gardening is of large interest to your readers. If you would like to pursue this story please contact me as soon as possible, and I can provide you with the necessary information.

Thank you for your time.

Sincerely,

Kirstie Childerson
